Career Profile

I am an information security and data protection professional with a solid technology background and business insight. I have excellent communications skills and have a proven track record building and leading organizations and programs. I have used that solid foundation to help drive risk management into products, services, and organizations and to provide demonstrated and proven value to the enterprise.

Areas of Expertise

- Information Security Management
 - Security Leadership and Strategy
 - Technical Risk Management Programs
 - Data Privacy and Protection
 - Litigation Preparedness Programs
 - Risk and IT Security Governance
 - Network Engineering and Architecture
 - IT Forensics and Electronic Evidence
 - Application and Network Penetration Testing
 - Intellectual Property Protection
-

Experience with Highlights and Achievements

Director, IT Risk Management, Johnson and Johnson I/T, Raritan, NJ, June 2009 – Present

Developed and implemented the Global Payment Card Industry (PCI) and Health Insurance Portability and Accountability Act (HIPAA) Compliance Programs and Global I/T Privacy Program

- Developed requirements and supported the implementation of the Security and Event Log Monitoring, Identify and Access Management, Data Leaving Production (DLP) and Web Filtering solutions.
- Developed and implemented the IT Privacy Program including a gap analysis, implementation roadmap, Safe Harbor and risk assessment program; and future vision for the Global IT organization.
- Redesigned the Worldwide Internet Compliance Office (WICO) program to include automation and maximize risk identification and efficiency while reducing time and resource requirements.
- Developed and implemented an enterprise-wide PCI and HIPAA Compliance Program that will identify areas of risk and develop a prioritized roadmap to reduce our compliance risk.

Senior Manager, Deloitte & Touche LLP, Princeton, NJ and New York City, NY, June 2007 – June 2009

Identified, developed, and delivered on information security, risk management, and privacy opportunities.

- Developed a Security Operations program that included security event logging and monitoring, risk assessment, incident response, litigation support, and vulnerability scanning for a global firm.
- Led and managed vulnerability and risk assessments and provided appropriate recommendations.
- Developed risk management programs from risk identification through risk monitoring that facilitated the launch of new products and services ahead of schedule with reduced costs.
- Developed compliance programs that addressed regulatory requirements, international standards, and leading practices that reduced risk, mitigated audit findings, and decreased cost to compliance.
- Developed an enterprise-wide security reference architecture that identified and defined the IT security functions, interfaces, requirements, and strategic vision for the global security program.

Director, Aon Consulting, Eatontown, NJ, February 2006 – June 2007

Built the information security and risk management practice and completed multiple engagements.

- Built the Information Security practice including staffing, knowledge management, sales and marketing tools, methodologies, templates, and project financials.
- Conducted global Security and Privacy assessments of organization's logical and physical infrastructure. Categorized findings, calculated exposure, and prioritized recommendations.
- Developed, implemented, and tested Business Continuity Management programs for several clients.
- Conducted multiple forensic investigations including evidence collection, analysis, and documentation to senior leadership and General Counsel.
- Developed a litigation preparedness assessment methodology and conducted assessments of several client programs, identified recommendations, and developed an implementation roadmap.

Managing Principal, Lucent Worldwide Services, Hong Kong, SAR & NJ, January 1999 – February 2006

- Served as a Trusted Advisor to Chief Security and Risk Management Officers to determine IT security goals, strategy, tactical and strategic responsibilities, and help implement their initiatives.
- Served as a subject matter expert on VoIP, IPTV, technology risk management, and systems and software development lifecycle security.
- Conducted global forensics investigations including evidence collection, analysis, and reporting.
- Lead and supported the delivery of engagements including risk assessments and management, vulnerability assessments, ethical hacking, network architecture, policy, and program development.
- Developed and managed strategy, goals, staffing, budget, and operational issues of the risk management team globally.
- Supported business operations including recruiting, budgeting, operations reviews, forecasts, product development, profit and loss statements, and leadership of security consultants.
- Grew the organization from two to twenty-five risk management professionals and developed new and recurring business opportunities and successful engagements.

Senior Security Engineer, Global Integrity (SAIC/Bellcore), Reston, VA, May 1995 – January 1999

- Performed and led network, host, and application risk assessments, penetration testing, and incident response testing including interviews, documentation reviews, data collection, and analysis.
- Prepared formal written reports and presented results to clients and management levels.
- Worked with clients post-assessment to ensure understanding of report findings and provided assistance at the system level to mitigate the risk.
- Provided formal security training including secure coding and risk management to clients.
- Assisted in the development of specifications, architecture, documentation, and software code of Power Builder and “C” based applications.
- Provided on-site, real-time, custom development of software to meet customer requirements and managed the national deployment team.
- Provided post-deployment support including enhancements, updates, and code maintenance.

Civilian Electronics Engineer, US Department of Defense, Ft. Monmouth, NJ, June 1991 – May 1995

- Managed several multi-location software and hardware systems through entire development cycle.
- Architected, designed, developed, and maintained Microsoft Windows and UNIX platform C and C++ applications for in-house and organization-wide use.
- Implemented innovative hardware and software technologies to reduce costs and downtime and improve mission efficiency, effectiveness, and readiness.

Education and Training

Master of Science Degree (MSSE) in Software Engineering
Monmouth University

January 1998

Bachelor of Science Degree (BSEE) in Electronic Engineering
Monmouth University

May 1991

Miscellaneous
